WEBSITE DEVELOPMENT PROPOSAL
FOR CWISH

Submitted By: Mr. Ashaya Shakya

Submitted To: CWISH

About Developer

I am graduate from Computer Science background and have been working in this field for more than 2 year. I have expertise in Website designing and development. I am full stack developer and capable of completing the work in allocated time frame. I have experience of working in:

1. HTML
2. CSS
3. JS
4. PHP

Project Objective

The project ought to be completed in the allocated time frame with the delivery of the complete website and contract to manage the website in further upcoming days. The website should be secured and well designed as well developed. The website will also be handled by the developer after development if the contract is done with the maintainence cost defined. The website will be clean, well documented. The complete custom CMS will be delivered developed in CI (CodeIgniter - A framework of PHP).

Project Time Frame

Planning	-	10 days
Analysis	-	5 days
Design and Development	-	25 days
Implementation and Testing	-	15 days
Total Days	-	55 days

Project Cost

The website cost will be one time cost and no further charge will be taken from the client by developer for the development. Beside the development cost, the annual maintenance cost (AMC) will be charged to the client by the developer. The cost is estimated below:

The total development cost of the website is : **Rs. 1,50,000** |- **excluding the TAX**

The annual maintenance cost of the website is: **Rs. 20,000** |- **excluding the TAX**

Payment

The initial payment of 40% shall be done at the time of contract and the rest of the amount shall be paid after the development of the website is completed. The Annual Maintenance Cost (AMC) needs to be deposited in the developers account each year at the day of the contract signed. The developer shall be paid AMC until the agreement is discarded by both party.

Development Platform

The website will be developed in the secured platform and the coding will be done from scratch. No prebuild CMS will be used as Wordpress, Joomla, Drupal etc. The website backend will be build using the PHP programming language. The framework of PHP known as CodeIgniter(CI)

will be used for the development. The tools and technology used is listed below:

1. HTML
2. CSS
3. JS
4. CodeIgniter
5. Sublime Text Editor
6. Windows OS
